HOSPICE SALES EXCELLENCE TRAINING

Facility-Type Specific Scripts

Expert Cold Call Approaches for Different Settings

ACUTE CARE HOSPITAL SCRIPT

Primary Pain Point: 24-48 Hour Discharge Windows + Readmission Penalties

Hospital discharge planners face CMS readmission penalties (\$5,000+ per readmission). Hospice identification must happen within 24-48 hours. Miss that window = patient goes home unsuitable for hospice = hospital readmission = financial penalty.

"Hi [Name], I work with large health systems on something I know you deal with daily: that 24-48 hour window from when a patient becomes appropriate for hospice to discharge. Most hospitals we partner with tell us they miss that window 30-40% of the time. How often is that a challenge for your facility?"

Key Points:

- Early identification within 24 hours
- Faster certification = discharge within window
- Fewer readmissions = lower CMS penalties
- Better quality metrics

SKILLED NURSING FACILITY SCRIPT

Primary Pain Point: CMS Therapy Scrutiny + Compliance Risk

CMS audits therapy aggressively. If a patient is hospice-appropriate, continuing PT/OT/SLP triggers audit, denied claims, and compliance violations. SNF administrators avoid therapy on hospice-appropriate patients to prevent penalties.

"Hi [Name], I work with skilled nursing facilities on CMS compliance around therapy on hospice-appropriate patients. We help identify those patients BEFORE therapy starts, avoiding non-covered services and compliance issues. Do you currently have a formal identification process?"

Key Points:

- CMS actively auditing unnecessary therapy
- Each unwarranted day = claim denial (\$200-1,200)
- Early identification prevents therapy from starting
- Better family satisfaction

ASSISTED LIVING COMMUNITY SCRIPT

Primary Pain Point: Family Satisfaction + Regulatory Expectations

AL administrators compete on family satisfaction. End-of-life conversations are complicated. Families want comfort and dignity—which hospice provides. Facilities doing this well get better reviews and higher retention.

"Hi [Name], I work with senior living communities known for great end-of-life experiences. Most families struggle with those conversations. Are you looking to strengthen how your team approaches those situations?"

Key Points:

- Family satisfaction = reviews + referrals

- End-of-life support improves satisfaction 40%+

- Positions you as premium provider

- Reduces complaints and litigation risk
