

Case Studies: Real Results

Documented Transformation Outcomes & ROI Analysis

CASE STUDY #1: 120-BED SKILLED NURSING FACILITY

The Challenge:

A 120-bed SNF was averaging only 2-3 hospice referrals per month despite having 40+ residents with life-limiting conditions. Staff reported feeling uncomfortable initiating hospice conversations, and families were often surprised when their loved one passed.

The Spartan Approach:

- Implemented monthly hospice eligibility screening rounds
- Trained nursing staff on goals-of-care conversation techniques
- Established direct communication channel with hospice liaison
- Created family education materials in multiple languages

The Results (6 Months):

300% INCREASE in monthly hospice referrals (2-3 !' 8-10/month)

- Family satisfaction scores increased from 3.2 to 4.6 (out of 5)
- Hospital transfer rate for end-of-life residents decreased 45%
- Staff reported feeling more confident in difficult conversations

CASE STUDY #2: 280-BED REGIONAL HOSPITAL

The Challenge:

A regional hospital struggled with late hospice referrals—average length of stay on hospice was only 5 days. This led to poor patient/family experience, increased costs, and missed quality metrics.

The Spartan Approach:

- Integrated palliative care triggers into EMR workflows
- Trained hospitalists on prognostic indicators and referral criteria
- Established 24-hour hospice admission guarantee
- Created seamless discharge-to-hospice pathway

The Results (12 Months):

100% INCREASE in monthly hospice referrals (6-8 !' 14-16/month)

- Average hospice length of stay increased from 5 to 28 days
- Readmission rate for discharged hospice patients: 0%
- Estimated annual cost savings: \$420,000
