

Facility-Type Specific Scripts

Customized Approaches for Each Healthcare Setting

ACUTE CARE HOSPITALS

Key Pain Points:

- Readmission penalties (30-day readmit rates)
- Length of stay pressure and bed turnover
- Patient satisfaction scores (HCAHPS)

Opening Script:

"I work with hospitals like yours to reduce readmissions and improve patient satisfaction scores. Many of our hospital partners have seen a 15-20% reduction in 30-day readmits by identifying hospice-appropriate patients 24-48 hours earlier. Is that something worth 10 minutes to explore?"

SKILLED NURSING FACILITIES

Key Pain Points:

- CMS therapy minute scrutiny and RUG optimization
- Staff burden and after-hours coverage needs
- Family satisfaction and complaint management

Opening Script:

"I partner with SNFs to provide 24/7 clinical support for your most complex residents. Our hospice team becomes an extension of your staff—handling symptom management, family conversations, and after-hours needs. How are you currently managing residents with declining trajectories?"

ASSISTED LIVING COMMUNITIES

Key Pain Points:

- Aging-in-place vs. hospital transfer decisions
- Family expectations and communication burden
- Staff training on end-of-life care

Opening Script:

"We help assisted living communities keep residents comfortable in their homes rather than transferring to hospitals during end-of-life. Our approach focuses on family communication and staff support. What percentage of your residents are currently aging in place versus transferring out?"

[TIP] SPARTAN STRATEGY

Always research the specific facility before calling. Reference their recent news, awards, or challenges to demonstrate you understand their unique situation.
